Ideation Phase
Brainstorm & Idea Prioritization Template

Date	08 March 2026
Team ID	
Project Name	Ucab – Cab Booking System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Our team conducted a brainstorming session to identify common problems faced by people while booking transportation in cities. Many users struggle to find reliable cabs quickly, especially during peak hours or emergencies. Existing systems sometimes show delayed driver availability, lack transparency in fare estimates, and do not provide an easy interface for quick booking.

After discussing different ideas, the team decided to develop Ucab, a web-based cab booking application built using the MERN stack (MongoDB, Express.js, React.js, Node.js).

Problem Statement:
Develop a simple and reliable cab booking system that allows users to easily book rides, track drivers in real time, estimate fares, and make secure online payments through a user-friendly interface.

Step-2: Brainstorm, Idea Listing and Grouping

During the brainstorming session, the team generated several ideas related to improving the cab booking experience.
Idea List
User Features

- User registration and login
- Select pickup and drop locations
- View nearby available cabs
- Fare estimation before booking
- Real-time cab tracking
- Ride booking confirmation
- Ride history and trip details

Driver Features

- Driver registration
- Driver verification system
- Accept or reject ride requests
- Navigation support for routes

- Trip completion confirmation

Payment Features

- Online payment system
- Automatic payment deduction
- Digital receipt generation
- Multiple payment options

Additional Features

- Discount coupons for rides
- Donation options for social causes
- Refreshments purchase during ride
- Customer support system
- Ratings and feedback for drivers

These ideas were grouped into categories such as User Management, Ride Management, Payment System, and Additional Services.

Step-3: Idea Prioritization

After listing all ideas, the team prioritized features based on importance, feasibility, and user impact.

High Priority Features

- User Registration and Login
- Cab Booking System
- Search Nearby Drivers
- Fare Estimation
- Real-Time Ride Tracking
- Secure Online Payment

Medium Priority Features

- Ride History
- Driver Verification
- Ratings and Feedback
- Customer Support

Low Priority / Future Features

- Discount Coupons
- Donation Options
- In-ride Refreshment Purchases

Based on this prioritization, the team decided to first implement the core cab booking functionality, followed by payment and tracking features. Additional features may be implemented in later development phases.
